EXPLORATORY DATA ANALYSIS PROJECT

Here is a link to a brilliant article describing why you should begin your data science journey in 2020:

https://towardsdatascience.com/5-reasons-why-you-should-begin-your-data-science-journey-in-2020-2b4a0a5e4239

This project is meant to give you a **fun** introduction to exploratory data analysis. The task is *simple*.

1. First, I would like you to explore kaggle and find a dataset that **interests you**, it can be on any topic from avocado weights to cardiovascular disease.

2. Using the dataset you will conduct a brief exploratory data analysis that includes visualization, and analysis of data. Your project must include (at least) three of the following

   - Boxplot(s)
   - Barplot(s)
   - Violin Plot(s)
   - Histogram(s)
   - Density plot(s)
   - Dotplot(s)

3. Your project must also include summary statistics over whatever dataset you choose.
